

- Duplicate digital CAD models precisely
- Build functional parts featuring:
 - Durable, uniform plastic
 - Razor-thin walls and sharp detail
 - Ultra-smooth surface finish
- Save time – 2X faster than other prototyping systems

Build Accurate, High-Resolution Plastic Prototypes

The ZBuilder™ Ultra rapid prototyping machine makes it easy to verify designs for form, fit and function prior to production; eliminate costly modifications to production tooling; and shorten time to market. ZBuilder builds parts additively using a Digital Light Processor (DLP) projector to solidify a liquid photopolymer, resulting in durable plastic parts that rival injection molding for accuracy, material properties, detail and surface finish.
